# Cybersecurity

Active Directory Security Review

Focus on finding Active Directory misconfigurations, dangerous defaults that can be abused
by threat actors for lateral movement, privilege escalation, ransomware deployment, planting backdoor and can be used for
command and control.

This service also provides security hardening and better posturing for the Active Directory.
Cloud M365 Security Review

Focus on finding cloud misconfigurations and checks for enforcement of conditional access policies, coverage of modern authentication including dangerous default configurations that are easily exploited by threat actors.

Ransomware Readiness Review

This service will evaluate the current technical controls for preventing ransomware deployment within the organization (on-premises).

The activity will involve reviewing the Incident Response Plan (IRP) playbook, Group Policy Objects (GPO) and will provide infrastructure design recommendation to manage safe recovery of systems.

CLOUD SOLUTIONS
WEBNET

IR Remediation Review

We offer advisory assistance and technical recommendations review for a pre/active/post security incident steps to contain, harden and remove the attacker from the environment.

IR

Virtualization Security Review

This service involves configuration review of ESXi environment to provide recommendations of misconfigurations and other known vulnerabilities that are commonly exploited for virtualization platform.

Education

This service is an on-demand type to be delivered onsite/remote as a workshop format for topics related to cyber security mainly on Incident Response (Remediation), Architecture & Systems Hardening (cloud and on-premises), Privileged Management, Endpoint Security.

Attack Path

This is a proactive service which helps the organization identify the shortest and complex attack path in the domain. The goal is to provide a better view of relationships between objects and the underlying technical risk and misconfigurations in between.
